Nuclear Physics at the Borderlines Jose M. Arias 2012-12-06 This volume contains the lectures presented by invited speakers at the IV La Rlibida International Summer School on Nuclear Physics. This was the IV edition of a summer school organized by our group every three years on topics related to nuclear physics. This Summer School was aimed mainly at young nuclear physicists, both theoreticians and experimentalists, engaged in research work at predoctoral or recent postdoctoral level. The topics treated in the three previous editions of the School were: "Heavy Ion Collisions", "Theory of Nuclear Structure and Reactions" and "Nuclear As trophysics". This year's School was entitled "Nuclear Physics at the Borderlines". Special emphasis was placed on those topics along which nuclear physics is expected to develop in the next few years. The aim of the School was to provide the attendants with an opportunity to get into close contact with experienced researchers and listen to their account of the present state-of-the-art in nuclear physics and the main future lines of development.

The Oxford Handbook of the History of Nationalism John Breuilly 2013-03-07 The Oxford Handbook of the History of Nationalism comprises thirty six essays by an international team of leading scholars, providing a global coverage of the history of nationalism in its different aspects - ideas, sentiments, and politics. Every chapter takes the form of an interpretative essay which, by a combination of thematic focus, comparison, and regional perspective, enables the reader to understand nationalism as a distinct and global historical subject. The book covers the emergence of nationalist ideas, sentiments, and cultural movements before the formation of a world of nation-states as well as nationalist politics before and after the era of the nation-state, with chapters covering Europe, the Middle East, North-East Asia, South Asia, Southeast Asia, sub-Saharan Africa, and the Americas. Essays on everyday national sentiment and race ideas in fascism are accompanied by chapters on nationalist movements opposed to existing nation-states, nationalism and international relations, and the role of external intervention into nationalist disputes within states. In addition, the book looks at the major challenges to nationalism: international socialism, religion, pan-nationalism, and globalization, before a final section considering how historians have approached the subject of nationalism. Taken separately, the chapters in this Handbook will deepen understanding of nationalism in particular times and places; taken together they will enable the reader to see nationalism as a distinct subject in modern world history.

Introductory Statistics Barbara Illowsky 2017-12-19 Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them. Intermediate Algebra 2e Lynn Marecek 2020-05-06

Prealgebra Lynn Marecek 2015-09-25 "Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.
